# VENDOR NEUTRAL ARCHIVE SOLUTIONS FOR HEALTHCARE

Medical Image Management

A Vendor Neutral Archive (VNA) is a consolidated data management solution that accepts a wide variety of patient data from various sources and formats, including medical image data, and manages it over its clinical lifetime in a vendor neutral format. The VNA acts like an information hub, acquiring data from various clinical sources and making the data available to various applications, systems, modalities and users for viewing.

ConvergeOne

By utilizing a Vendor Neutral Archive, there is room for significant cost avoidance and savings as an organization's vendors, systems and modalities change and the environment becomes more complex. An effective VNA solution should scale to accommodate an organizations changing infrastructure.

Healthcare providers trust ConvergeOne to provide solutions to reduce IT complexity enabling them to maximize data access.

We utilize a proven methodology to provide end-to-end management of all phases of your project, from planning recommendations through implementation and management of your infrastructure.

With more than 20 years of experience integrating solutions in healthcare, ConvergeOne understands the industry, the needs of its users and its business requirements. Together with our experience in designing, planning, provisioning and implementing solutions of all types and sizes, this enables us to offer unparalleled expertise, knowledge and skills for your Vendor Neutral Archive needs.
