C1 Security with paloalto® NETWORKS

Simplifying Cybersecurity with Palo Alto Networks' Precision AI™ and C1

Overview

In the face of increasing cyber threats, organizations must leverage advanced technology to safeguard their environments efficiently and effectively. Palo Alto Networks' latest innovation, AI Copilots, integrates AI-driven solutions to automate and streamline security operations, offering C1 customers a way to enhance their cybersecurity posture.

Challenges faced by organizations

Security teams often face resource constraints and data overload, making it challenging to detect and mitigate threats promptly. Manual processes across disparate technologies slow down the identification of incidents and the response to breaches. This complexity increases the risk of security gaps and leaves organizations vulnerable.

The solution: Palo Alto Networks' AI Copilots

Palo Alto Networks' AI Copilots address these challenges by leveraging generative AI to automate routine security tasks, enrich threat intelligence, and support rapid decision-making. These AI tools provide immediate access to vast knowledge bases, documentation, and real-time insights, enabling security teams to focus on strategic efforts rather than manual searches.
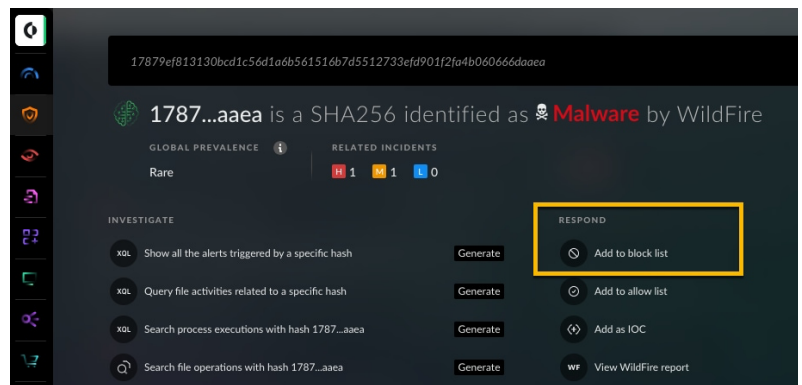

Key benefits

Speed and efficiency
AI Copilots accelerate threat detection and response, ensuring that teams can act faster and more accurately in high-pressure situations.

Seamless integration
Available at no extra cost for Strata®, Prisma® Cloud, and Cortex® platforms, these copilots integrate into existing security workflows without additional budget impact.

Real-time insights
These AI tools deliver immediate access to information, reducing time spent on searches and enabling swift remediation actions.

AI Copilot Platforms

Strata® Copilot: Designed for network security, this copilot utilizes natural language processing to simplify threat detection and response, providing quick and actionable insights for network teams.

Prisma® Cloud Copilot: Tailored for cloud environments, it ensures seamless governance and compliance management across multi-cloud platforms, simplifying policy enforcement and cloud security management.

Cortex® Copilot: Focused on SOC operations, Cortex Copilot aids in analyzing threats and offers tailored recommendations for incident response, reducing investigation time and increasing efficiency.

How C1 supports your implementation

C1 understands that not every organization requires the full suite of AI capabilities. We guide our customers in determining which features align best with their needs and environment:

Strata® Copilot: Ideal for customers with complex or multi-location network architectures. C1 helps configure and optimize the copilot for streamlined network protection.

Prisma® Cloud Copilot: Perfect for managing multi-cloud or hybrid environments. C1 assists in configuring and deploying this copilot to enhance policy management and compliance.

Cortex® Copilot: Best for SOC teams requiring robust incident response capabilities. C1 supports integration and optimization of this AI-powered assistant to ensure rapid and effective threat response.

Recommendations for C1 customers

To maximize the benefits of AI Copilots:

Evaluate security needs: Not all capabilities may be necessary. C1 conducts a comprehensive assessment to recommend AI features that provide the most value.

Implement gradually: To avoid overwhelming security teams, C1 advises a phased approach, integrating copilots with existing systems and processes.

Continuous monitoring and adjustment: C1 works alongside customers to monitor copilot effectiveness, making necessary adjustments to maximize impact.
