

C1 Security Experience

Risk Mitigation Solution Suite

80% of enterprises see improved regulatory compliance with continuous risk monitoring¹.

In today's evolving cyber threat landscape, technology proliferation and lack of consistent application of security governance are putting businesses at risk, as many organizations struggle to effectively manage expanding attack surfaces, increasing sophistication of threats, and growing complexity of IT environments.

The C1 Risk Mitigation Solution Suite, which includes C1 Security WAVES Assessment, C1 AMaaS (Asset Management as a Service), and C1 VMaaS (Vulnerability Management as a Service), empowers organizations to proactively assess, manage, and mitigate risks to strengthen their overall security programs.

The C1 risk mitigation advantage: Proactive. Scalable. Automated. Comprehensive.

C1's Risk Mitigation Solution Suite offers organizations a unified, end-to-end approach to managing risk. With a focus on automation, scalability, and expert insights, this solution helps reduce vulnerabilities, improve compliance, and deliver real-time risk management.

Proactive

Stay ahead of evolving threats with automated vulnerability detection and remediation processes.

Scalable

Adapt easily to the changing needs of your organization with scalable services that grow with your business.

Automated

Leverage automation for continuous monitoring, reducing manual intervention and minimizing human error.

Comprehensive

Gain a holistic view of risks across your enterprise, including asset management, vulnerability detection, and compliance.

The C1 Risk Mitigation Solution Suite includes:

Design

Illuminate

Remediate

Security WAVES

- Comprehensive risk assessments aligned with industry best practices.
- Tailored security strategies to manage risks across hybrid and distributed environments.
- Compliance monitoring and reporting to meet evolving regulatory requirements.
- Expert-led risk assessment workshops to identify key security gaps.

Asset Management as a Service (AMaaS)

- Comprehensive asset inventory across your organization.
- Real-time visibility into asset security assessments and status.
- Automated asset discovery and continuous tracking of devices and systems.
- CMDB reconciliation for accurate asset data and a unified view of your environment.

Vulnerability Management as a Service (VMaaS)

- Real-time scanning of known vulnerabilities across covered assets.
- Prioritized reporting based on the risk to critical assets.
- Risk scoring across the total attack surface.
- Proactive alerts when new threats emerge.

Features

Attack surface management

C1 WAVES Security helps customers understand and manage their full attack surface. It combines internal and external asset visibility with robust security assessments to strengthen defenses.

Asset management

C1 AMaaS delivers real-time insights into asset inventories, helping organizations streamline asset lifecycle management and ensure compliance across endpoints, cloud environments, and SaaS applications.

Vulnerability management

C1 VMaaS helps organizations detect, assess, and remediate vulnerabilities across their IT infrastructure. The service provides automated vulnerability scanning, prioritization based on risk, and real-time reporting to stay ahead of cyber threats.

Comprehensive reporting and compliance

Meet stringent regulatory requirements through continuous monitoring, automated compliance reporting, and proactive remediation, reducing the risk of penalties and business disruptions.

Business benefits

Reduce risk exposure

Proactively address vulnerabilities and minimize the risk of data breaches.

Improve compliance

Continuously meet regulatory requirements and industry standards with automated reporting.

Enhance operational efficiency

Automate key processes, reduce manual intervention, and streamline risk management efforts.

Boost cyber resilience

Ensure your organization is protected from emerging threats while maintaining business continuity.

The risk mitigation suite is part of the C1 OnGuard managed security portfolio
