

## WHAT IS YOUR DATA CENTER INFRASTRUCTURE RESILIENCE SCORE?

The fundamental role of the Data Center infrastructure is to protect, secure and serve applications and data, transforming them into information. Data protection is an encompassing topic, as it spans security (logical and physical), reliability, availability, serviceability backup/restore, archiving, and disaster recovery (DR).

We always hear about Data Center infrastructure outages and service disruptions, many of which are preventable with proper infrastructure redundancy and protection in place.

### ConvergeOne Data Center Foundation Workshop

The ConvergeOne Data Center Foundation Workshop focuses on the resiliency of your Data Center infrastructure. During this workshop, we will analyze your Data Center infrastructure reliability, support, monitoring, management, disaster recovery, data protection, and data security.

Our team of Data Center experts have designed this workshop to fully understand your current environment and identify potential risk factors.

The desired outcome of your ConvergeOne Data Center Foundation Workshop (offered at no cost to you) is to provide you with a consolidated list of recommendations and next steps to improve resiliency of your existing Data Center infrastructure.

*“IT Resilience is the new Disaster Recovery.”*

*—John Morenci,  
Research Vice President,  
Gartner*

### LET'S GET STARTED

The ConvergeOne Data Center Practice lives on the bleeding edge of digital transformation. Trust the service provider who is trusted by 73% of the Fortune 100. Start by scheduling a Data Center Foundation Workshop with ConvergeOne today.
