

Remote Workspace | Education

Expectations are high for educational leaders to adopt and sustain a significant off-campus community of teachers and students with reliable access to the data and learning applications needed to keep everyone on track. The abrupt COVID-19 crisis leaves little time for trial and error. ConvergeOne can expedite your efforts with a tight, tested architecture for cloud desktops that puts you in the driver's seat without compromising your data security standards—and without the guesswork of sourcing multiple products from a COVID-compromised supply chain.

ConvergeOne's Remote Workspace solution is purpose-built on cloud-based desktop technologies by AWS Workspaces to provide you with on-demand, infinitely-scalable, secure Windows or Linux desktops for tens or thousands of users at once. Accessible from anywhere in the world and on virtually any device, you can enable a diverse user group to "Bring Your Own Device" for secure access to the resources they would typically use in the lab and classroom.

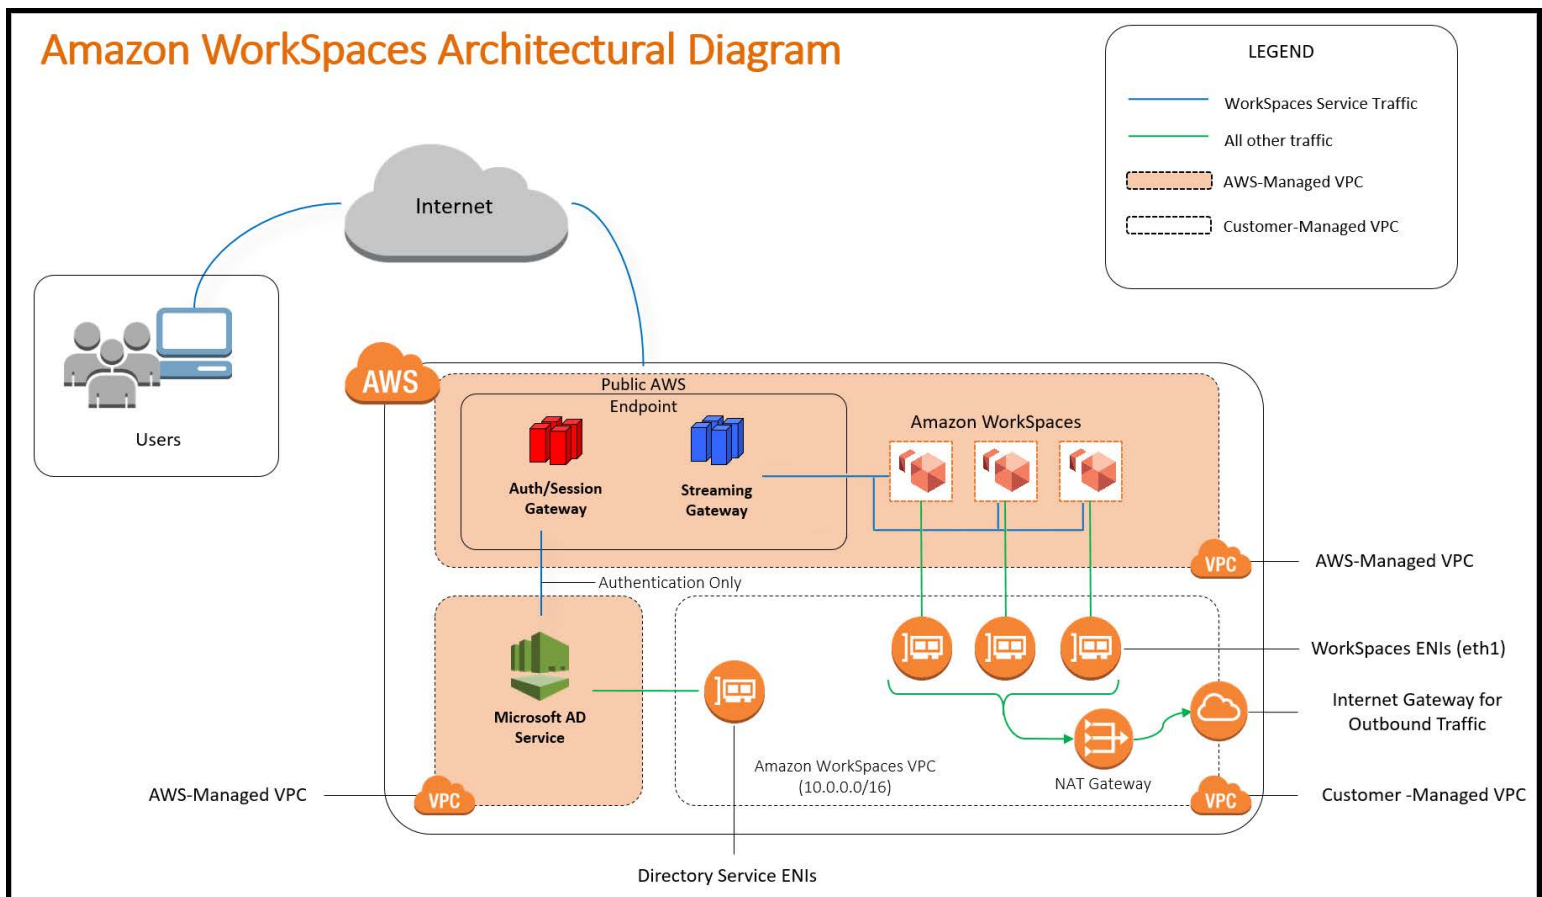

Benefits of ConvergeOne's Remote Workspace:

- Deploy desktops to staff or students within minutes
- Secure sensitive data and applications within the cloud, not on individual computers
- Provide virtual labs on-demand
- Scale CPU, memory, and storage resources up and down to follow the school year
- Centrally manage access controls and provisioning

What's Included?

- No charge Workshop and Assessment to capture the right requirements for your Remote Workspace
- Up to 50 free Windows and/or Linux desktops until June 30, 2020
- Expert design, installation, and quickstart services by ConvergeOne Data Center Engineers
- Windows and Linux desktop Operating System licensing
- Cloud connectivity to your data center through Data Center VPN, SD-WAN, and/or Direct Connect options
