

ConvergeOne Remote Workspace

As organizations are forced to shift their workforce to a work-from-home model in response to the COVID-19 pandemic, companies are faced with the problem of providing their employees with the technology they need to be productive. Issuing laptops to every employee to use at home is an effective solution, but laptops are expensive, and few organizations have the laptop inventory to quickly provide users this technology.

With ConvergeOne's Remote Workspace solution, we utilize AWS WorkSpaces cloud-based desktop technologies to provide our customers with on-demand, infinitely scalable, and secure Windows or Linux desktops. These Remote Workspaces are accessible from anywhere in the world and on virtually any device, allowing customers to enable an employee "Bring Your Own Device" model to securely access the data and applications they would typically use within the office.

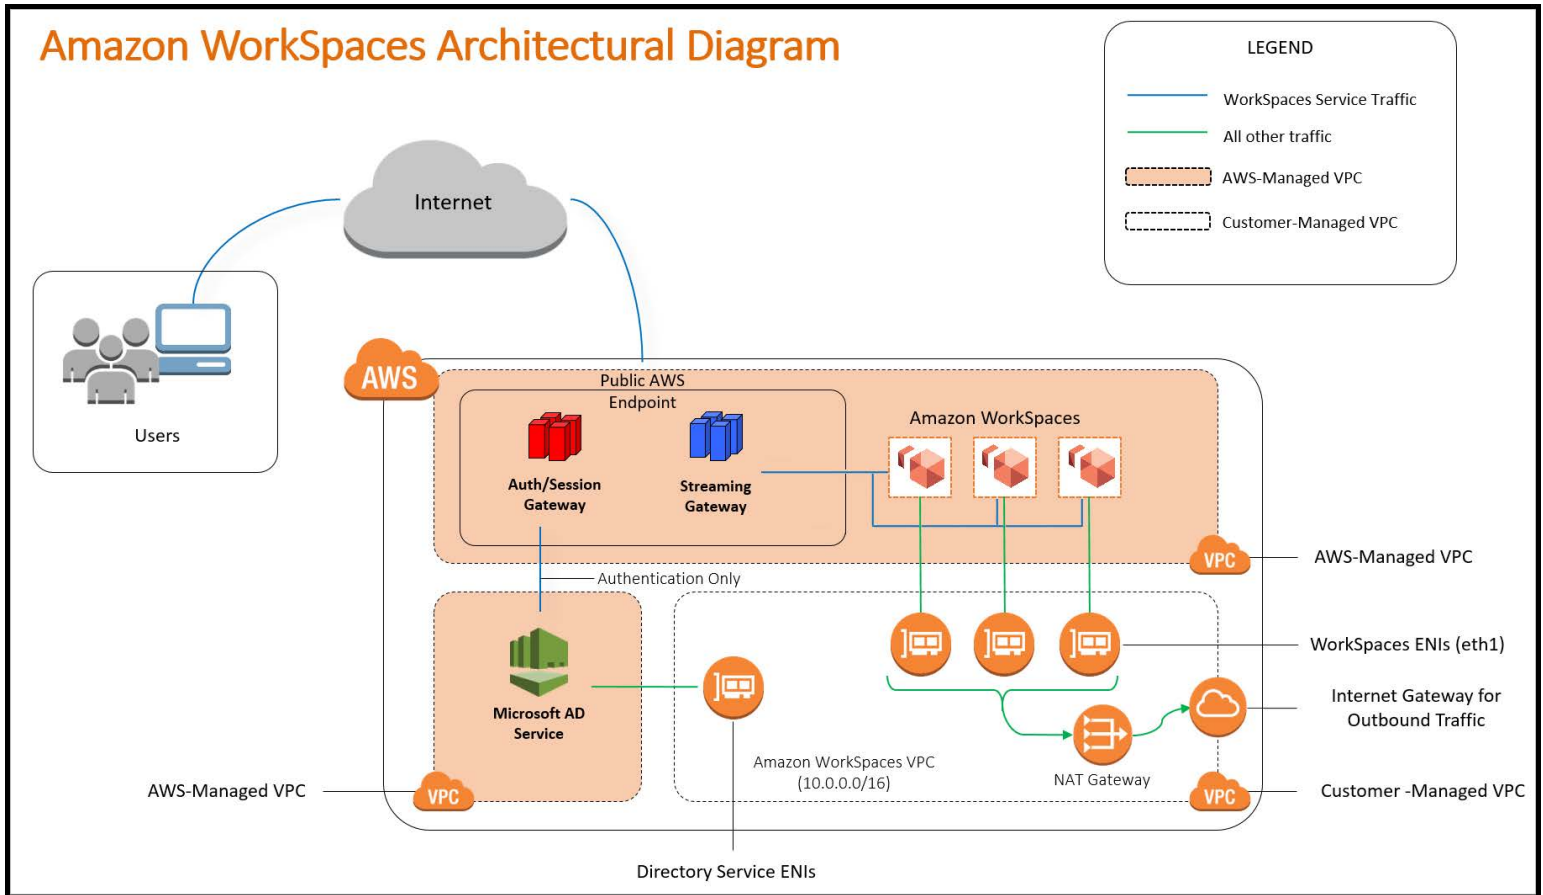

Benefits of ConvergeOne's Remote Workspace:

- Deploy desktops to employees within minutes
- Secure company data and applications within the cloud, not on individual computers
- Low cost, on-demand resources
- Scalable CPU, memory, and storage resources to meet performance needs
- Centrally managed provisioning and access controls

What's Included?

- No charge Workshop and Assessment to capture your unique requirements for Remote Workspace
- Up to 50 free Windows and/or Linux desktops until June 30, 2020
- Expert design, installation, and quickstart services by ConvergeOne's Data Center Engineers
- Windows and Linux desktop Operating System licensing
- Cloud connectivity to your data center through Data Center VPN, SD-WAN, and/or Direct Connect options
