

## Cloud-Scale Remote Access

### SCALE YOUR VPN WITH CONVERGEONE

The global COVID-19 pandemic has forced organizations of every size and industry to re-think how they conduct their business, allow employees to work, and try to make the best of a difficult situation. Part of this challenge is enabling the ability of their workers to work from home so they can be safe but still productive to the business. Most companies utilize Virtual Private Networking (VPN) services to allow users to remotely connect to the company network in a secure and reliable way, however, most VPN implementations were not designed for 100% remote worker situations and the ability to quickly (and cost effectively) scale up these solutions in this time of crisis is difficult to do.

Introducing ConvergeOne's Cloud-Scale Remote Access VPN solution. With Cloud-Scale Remote Access, we leverage scalable, cost-effective, and secure cloud-based infrastructures to establish a virtually limitless VPN solution that connects back to your data center over a Secure Socket Layer (SSL) or direct connect network link. Because we link the Cloud-Scale Remote Access VPN solution with your existing VPN technologies, your users connect to the VPN just as they have done before while you still have control over access and security policies.

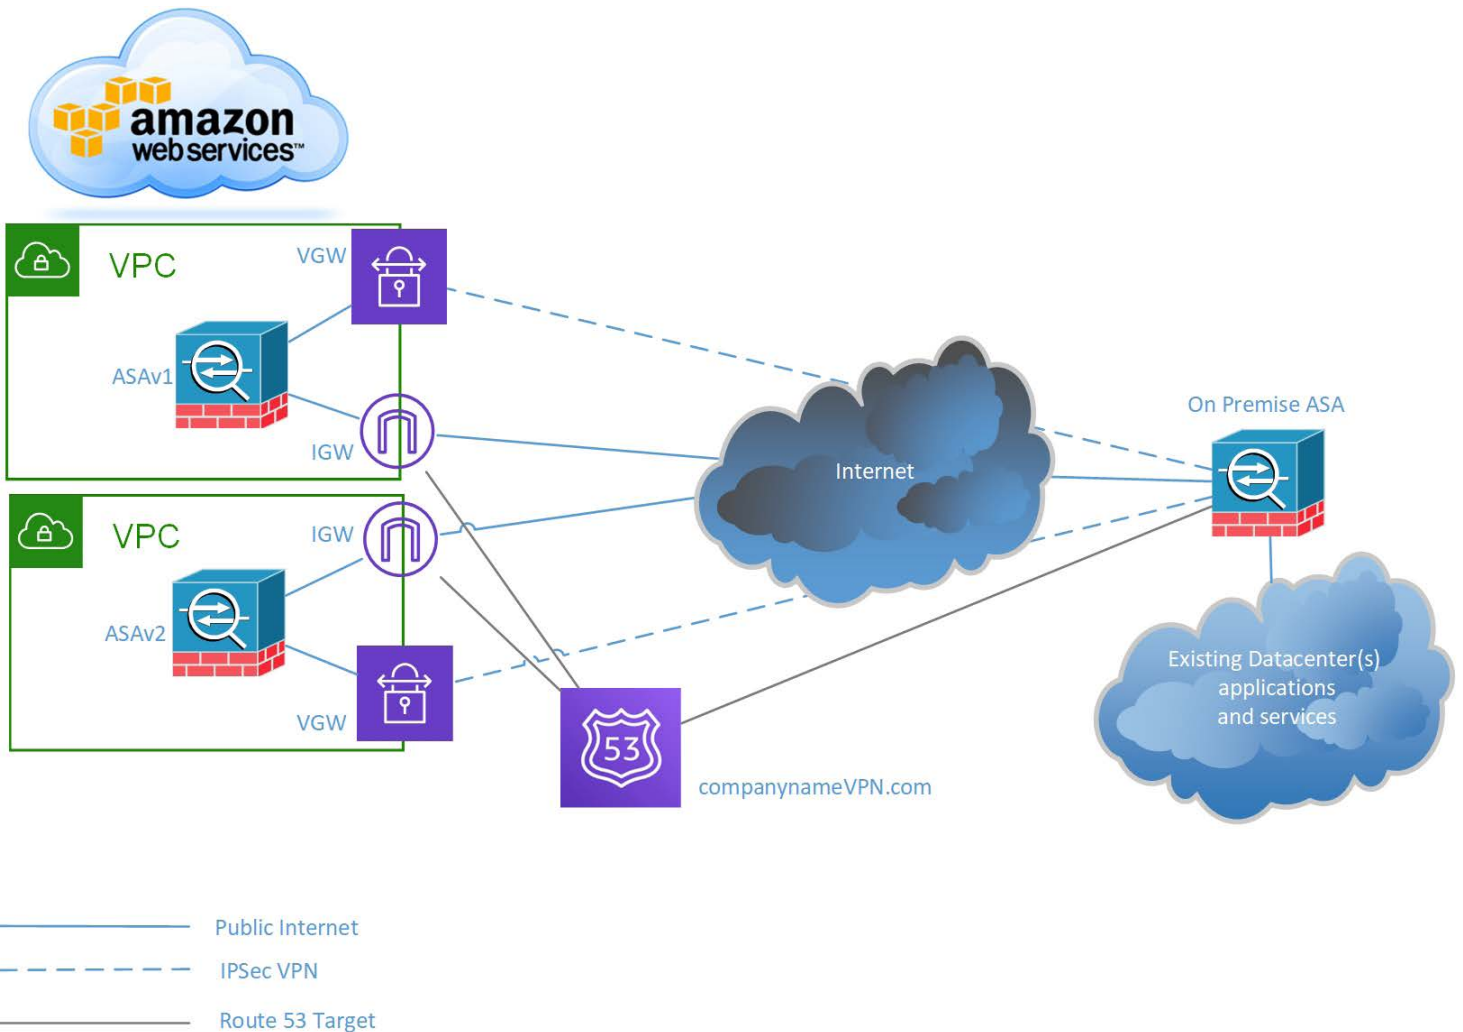

### What's Included?

- Expert design, installation, and integration services by ConvergeOne's Engineering Team
- Cloud-Scale infrastructure and resources to address any size environment
- VPN subscription options for short, long, or permanent licensing
- Cloud connectivity options: Data Center VPN, SD-WAN, Direct Connect

# QUICKSTART ENABLEMENT | BUSINESS CONTINUITY
