# A SEAMLESS TRANSITION TO THE CLOUD

## ConvergeOne Multi-Cloud Experience (C1MX) Cloud Migration Services

A national medical insurance provider was in the process of being divested from its larger parent organization. Its existing infrastructure was 12 years old, and its co-location data center's lease would soon be expiring. The company had no physical location available to host its data center following its divestiture from its parent organization, and time was quickly running out to solidify a refined application strategy. It required a new solution that could quickly be implemented and grow with the business.

ConvergeOne served as a trusted partner and advisor to the customer, providing C1MX Cloud Migration Services to ensure a seamless and successful transition to the cloud. ConvergeOne began the engagement by conducting a Cloud Assessment to gain a better understand of the customer's applications, utilization, and resource requirements. Following the assessment, ConvergeOne's expert cloud team designed a new Microsoft Azure public cloud architecture and developed a migration plan to relocate the customer's servers to the cloud.

With ConvergeOne by its side, the customer was able to seamlessly migrate 34 servers from the co-location data center to Microsoft Azure. Following the successful migration, the customer has a more stable, highly available data center solution that can be accessed anywhere. ConvergeOne continues to meet with the customer every quarter to perform Cloud Optimization Services that minimize cloud waste, reduce the monthly spend, and tune the servers for optimal performance.

## STREAMLINE YOUR JOURNEY TO THE CLOUD

Migrating your workloads to a private or public cloud doesn't have to be difficult. Start your journey by registering for a C1MX Cloud Migration Workshop: [convergeone.com/cloud-migration-workshop](https://convergeone.com/cloud-migration-workshop)
