

CONVERGEONE C-STACK POWERED BY C1MX

With complexity at an all-time high and so many options available for your data center, you need a solution that deploys quickly and easily, with little to no interruption to your business. You need a solution that can scale both in your own data center and in the cloud or colocation site. You need a solution that consistently performs, when you need it. ConvergeOne C-Stack addresses all this and more.

What is ConvergeOne C-Stack?

Converged Infrastructure

- Joint solution between Pure Storage + Cisco
- Built on standards enabling unified support
- Premium Support Options

Traditional Data Center Issues

- Customer experiences disruptions with each upgrade or expansion
- Time to value is extended due to lack of time available for projects
- Disparate components result in instability and issues with support

ConvergeOne C-Stack Services

- Full build facility in The Mile High City
- Architected solution with cable everything structure
- Integration into traditional networking or ACI
- Transport services to anywhere in the continental U.S.

Outcomes

- Avoid pitfalls of independent upgrades of DC equipment
- Gain immediate productivity gains
- Single point of contact for support of entire stack
- Easily create hybrid cloud solutions

The ConvergeOne Advantage

1

Return on Investment (ROI) as high as 400% with ConvergeOne program.

2

As quick as 10 month break even value.

3

Up to 46% lower costs across Infrastructure + Staff + Productivity.

COMPLETE, TURNKEY SOLUTION

Traditional datacenter solutions are broken into layers with different refresh cycles. Every upgrade or expansion can result in downtime or disruption to your business. Simplify or eliminate this cycle by looking to an architected solution that considers the entire stack. ConvergeOne C-Stack provides the people, process, and technology needed to design, build, transport, and support your datacenter. Our turnkey solution includes the following.

Workshop + Assessment Services

- Identify key drivers
- Identify desired outcomes
- Qualitative and quantitative requirements
- Inventory of Applications and data
- Inventory of current Data Center technologies in use

Solution Design Services

- Architecture/ Infrastructure
- Public Cloud Services
- Business Continuity
- Disaster Recovery
- Orchestration Services
- Managed Services

Product Procurement

- Hardware/Software
 - Network, compute, storage
 - Colocation solutions
- Integration into existing or new networking
- OEM maintenance agreements for unified support
- Available Flexible Financing Options

Installation + Integration Services

- Customer specified build
- Extensive quality testing
- Meticulous cable design
- Transportation services
- Solution Documentation

IS YOUR ORGANIZATION IN NEED OF A BETTER WAY TO RUN YOUR DATA CENTER?
