

[WORKSHOP] WIRELESS PERFORMANCE + MANAGEMENT

WORKSHOP PROCESS

Phase 1

Obtain high level overview of the current wireless architecture to include:

- Current WLAN management platform(s)
- Current access point infrastructure
- Current WLAN services platform(s)
- Current user groups and devices
- Current wireless access locations

Phase 2

Determine technical and business constraints of the current wireless network to include:

- Overview of user and device wireless performance issues
- Upcoming wireless devices
- Upcoming wireless services
- Solution budget

Determine desired operational capabilities of the wireless network to include:

- User and device visibility and performance
- Wireless infrastructure management/automation
- Business policy requirements

OUTCOME

- Develop to address business and technical needs

LOCATION

- On-site
- Virtual

PREFERRED ATTENDEES

Networking Engineering and Network Security Leadership

TIME FRAME

- Phase 1 | 1-2 hours
- Phase 2 | 2-4 hours

CONTACT US

Register for a free assessment of your environment, and learn how to:

- Ensure that the wireless network is providing the most business value
- Build a wireless network that can support growing user, device and application requirements
- Significantly reduce time to issue resolution
- Simplify network operations
