

# A UNIFIED NETWORK DELIVERING SECURE ENTERPRISE ACCESS

## AT A GLANCE

The Jacksonville Jaguars kicked off a brand-new sports performance center project—one of its largest projects to date. ConvergeOne's Enterprise Networking experts will build a flexible, software-defined, hybrid network with a high level of security to support the upcoming transition of all the Jaguars' football operations and networks into the brand-new Miller Electric Center, a 125,000 square foot facility set to open summer 2023. The partnership with ConvergeOne will result in a scalable and modern, state-of-the-art infrastructure, promoting more real-time connections among people, devices and applications.

## BUSINESS EXPECTATION + RESULTS

## OPERATIONAL AGILITY AND PERVERSIVE CONNECTIVITY

- + **The Jacksonville Jaguars**, a professional American football team based in Jacksonville, Florida, began play in 1995 and has since expanded its footprint to also include an annual international game.
- + As the organization tackles growing business needs, it requires a partner like ConvergeOne to support the upcoming transition of all its football operations and networks into a brand-new building with the development of a unified, next-generation infrastructure that defines network modernization.
- + The newly built high-speed, high-performance network will provide the organization with improved ease of management, heightened security and increased data creation/consumption at the edge.

**SCALABLE  
AND SECURE**

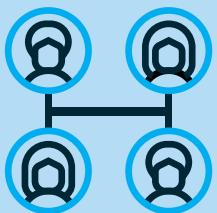

**EXPANDED  
NETWORK  
CAPABILITIES**

**INCREASED  
RELIABILITY  
AND CONTROL**

## THE PURPOSE

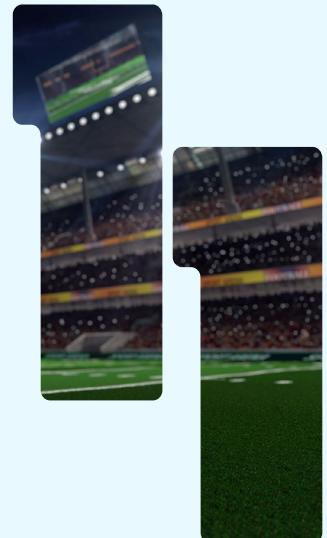

# SECURE AND SAFE ACCESS FOR ALL

From players and coaches to the internal operational staff and visitors, everyone will be able to connect to one network with different levels of access depending on the type of user.

PROVEN, PROGRESSIVE, PURPOSEFUL

## UNCOMPROMISING PERFORMANCE EXPERIENCES

- + ConvergeOne's networking solutions for the Jaguars' performance center will be engineered and designed to create a seamless experience for all its users – a bulletproof network with heightened security.
- + The network will provide new cloud connectivity for the administrative team, allowing them to have a single-pane-of-glass view through all their devices while equipping the coaches and players with the capability to access coaching equipment and documents directly on their devices at the stadium.
- + Similarly, fans will have access to consistent and reliable high-speed Wi-Fi for a smooth experience. Game-day attendees will have uninterrupted access to their devices – from scrolling and posting on their social media apps to texting and accessing other websites and apps while enjoying the live game.
- + The project will serve as the central hub for the organization's infrastructure and all future developments, removing the need to rip and replace solutions.

*"We trust ConvergeOne's expertise in Wi-Fi management because we've used them for several years as our on-site support for wireless at all of our major events. We know the engineers who work on-site on game day, and we trust them. By designing this new network in tandem with ConvergeOne, the implementation will have a better chance of success. It was a logical step to continue our partnership with them."*

**- MICHAEL WEBB, VP AND CIO, JACKSONVILLE JAGUARS**
