

BUILDING A DIGITAL EXPERIENCE FOR A LARGER THAN-LIFE ENTERTAINMENT FACILITY

Challenge

A large corporation needed a complete IT infrastructure to support its larger-than-life entertainment facility.

With no IT staff or methodology for determining the technology it would need to support its goals, it needed a partner to build a plan from the ground up.

The goal of the project was to provide a unique digital experience to customers that is in-tune with social media.

“Customers are able to do something that hasn’t been done before in the standpoint of networking and user experience.”

Solution

ConvergeOne helped deploy two Active/Active Data Centers powered with Software-Defined network, Flash Stack architecture, and over 2,000 wireless access points. This allowed the customer to effectively integrate different technology types and support a one-of-a kind entertainment and digital experience for visitors with a complex immersed in the latest and most innovative technologies. The solution integrated components from leading partners like Avaya, AVST, Cisco, Dell Technologies, Pure Storage, Ribbon, Veeam, and VMware.
