

A HOLISTIC NETWORK ARCHITECTURE FOR A PEDIATRIC HEALTHCARE PROVIDER

Challenge

A leading national pediatric healthcare provider was having difficulty maintaining and scaling their network, which had grown organically over the years. This presented them with difficulties in implementing new technologies to support clinical applications—most specifically, multicast video.

Solution

ConvergeOne developed a holistic network architecture, presenting the healthcare provider with a roadmap for implementing their next-generation network. The new architecture greatly simplified the overall network while still ensuring a stable, resilient, and scalable network infrastructure.

Results

The healthcare provider's network is now better able to scale and adapt to the needs of their clients.

Administrators can troubleshoot and isolate network problems in a more prescriptive manner, ensuring better service delivery for patients and clinicians.

Overall, the healthcare provider's network now has a stronger foundation and can more effectively support new technologies and applications.
