

A FACIAL RECOGNITION SOLUTION FOR A PUBLIC SAFETY DEPARTMENT

Challenge

A state government's public safety department needed a solution that could use current facial recognition technology accurately and maturely enough to provide valuable image comparisons for criminal investigations.

Traditionally, the department needed to wait on the FBI to conduct facial recognition searches and only top-tier cases would get priority.

Solution

ConvergeOne and NEC partnered together to provide the world's fastest and most accurate facial recognition solution based on the findings of the National Institute of Standards and Technology (NIST) in the United States.

Results

- This enhancement speeds up the department's investigation process and allows it to work on its own, without relying on the FBI.
- The department has the ability to search an image against **millions of images** from a multitude of data sources statewide.
- The new technology allows the department to fulfill its primary function of enhancing public safety.
