

PROVIDING A SCHOOL DISTRICT WITH THE INFRASTRUCTURE TO SUPPORT THE MODERN CLASSROOM

Challenge

One of the largest Unified School Districts in the U.S. is comprised of over 65,000 students, 25,000 staff, and 150 school campuses within the city.

The district needed a more resilient infrastructure in order to align to its 2025 vision that is based on evolving teaching practices in the classroom, such as leveraging digital remote learning, 21st century workplace skills, and more interactive media.

Solution

- ConvergeOne provided the customer with a robust infrastructure, in a more equitable and equal manner, so that all schools across the district would have the same level of capabilities and resources.
- ConvergeOne developed an architecture that leveraged a software solution for automation, security, and visibility so the school district can do more with less touches.

Results

The small IT team can scale a large infrastructure for **70,000-80,000 users.**

This multi-year program helped schools replace switching infrastructure, data center fabrics, and compute and storage.

The next phase is to leverage software capabilities to drive more visibility and security capabilities into the classrooms.

Discover how ConvergeOne Evolves Your Classroom

There is an art to successfully “digitizing” the classroom and it starts at the intersection of technology and pedagogy. Discover how ConvergeOne owns this space: convergeone.com/industries/k12-education
