ENSURING SUCCESS IN THE CLOUD

ConvergeOne Multi-Cloud Experience (C1MX) Cloud Migration Services

After a national life insurance provider was featured in a live daytime TV interview and marketing promotion, it developed a need for a rapidly scalable public website due to the influx of attention it was receiving. The current website was hosted within its private data center using WordPress, and the insurance provider needed a new, fully automated solution that could grow and shrink as necessary without requiring IT involvement to deploy or remove services.

After taking the time to determine the appropriate cloud infrastructure to meet the customer's needs as part of its C1MX Cloud Migration Services, ConvergeOne proposed a solution that would utilize Azure Web Services to re-host WordPress within the Microsoft Azure public cloud. By running the website in a Platform as a Service architecture, it would be able to dynamically scale up and down based upon demand —without requiring any IT intervention.

This engagement marked the customer's first entry into public cloud, and following the success of the initial migration, the customer's use of Azure cloud services has doubled. ConvergeOne continues to work with the customer to modernize additional data center applications and deploy a DevOps methodology for IT operations.

STREAMLINE YOUR JOURNEY TO THE CLOUD

Migrating your workloads to a private or public cloud doesn't have to be difficult. Start your journey by registering for a C1MX Cloud Migration Workshop: convergeone.com/cloud-migration-workshop
