DATA PROTECTION SERVICES
SECURING THE VALUE OF BUSINESS AND IT

TODAY'S DATA PROTECTION CHALLENGES

Security and physical threats to data center operations continue to expand in scope, sophistication, and cost. Threat costs are no longer confined to availability or backup and recovery times as today's sophisticated malware attacks present credible challenges to corporate viability. In the post-Covid economy, many organizations struggle to maintain viable data protection solutions in-house. Sighting difficulty retaining or upskilling IT resources, justifying the cost of dedicated IT resources for non-revenue producing activities, means Data Protection often receives token acknowledgement, incomplete solutions, and unreliable results.

PROVEN BUSINESS PROTECTION SOLUTIONS

Customers deploying ConvergeOne Data Protection services gain complete datacenter operational continuity planning and recovery solutions tuned to their requirements. ConvergeOne customers can lean on skilled ConvergeOne specialists for planning, implementing and if needed, managing fully tested and proven premises and cloud-based ransomware protection solutions. Coupling broad industry experience with industry standard technical solutions, ConvergeOne data protection services enable early detection and quick recovery from cyber-threats while assuring operations during unplanned outages or ransomware attacks. Built to provide agility with the right mix of hardware, software, planning, and adaptability with a unique, tested, and proven methodology to meet customer requirements. With tested and proven Disaster and Cyber Recovery services, Ransomware readiness and Business Continuity plans ConvergeOne can provide solutions to protect your data and your business.

CONVERGEONE DATA CENTER PROTECTION OFFERINGS

ConvergeOnes' Data Protection offerings make recoverability of critical information and technology systems an actionable reality.

Cyber Recovery Services - Defeat malicious, costly, ransomware attacks and return to operation with privacy and data intact. ConvergeOne's Cyber Recovery Services bring together the technical solutions, platforms and expertise that go beyond token protection measures, enabling customers to recover from malicious attacks or unforeseen failures. Using specialized cyber vault and indexing technologies with traditional backup platforms enables customers the ability to recover systems and data to resume operations as quickly as possible.

Disaster Recovery Services - Ensure business continuity and provide end-users seamless access to their applications and tools, ConvergeOne simplifies and accelerates customers journeys to solid, actionable disaster recovery using Governance teams to set strategy and ensure alignment with business objectives and Operational teams to ensure disaster recovery plans are written, tested and, when necessary, implemented. With AWS cloud services ConvergeOne can facilitate "as-a-service" delivery and in the event of a significant interruption governance and operational teams to ensure the recoverability of critical information and technology systems.

CUSTOMER SUCCESS

Cyber Recovery in Action - Protecting the Community from Ransomware Attacks

+ Implement a comprehensive cyber recovery solution to protect a school district's data from the ransomware attacks plaguing neighboring districts. Determine areas of vulnerability and identify gaps in the school district's existing environment. Develop a cost comparison giving the district the information needed to employ a comprehensive cyber recovery solution Despite attempts, the customer was not adversely affected by ransomware attacks.
