

NETWORKING SERVICES
**ENTERPRISE NETWORKING
 MODERNIZATION - ACCELERATING
 BUSINESS COMPETITIVENESS**

WHEN DIGITAL STORMS STRIKE

The “new normal” struck organizations like a tsunami. Core operations were up ended creating disruptions from supply chains to skilled resource shortages to relocation of work itself. As a central focal point of IT and operations, Enterprise Networking, has taken the brunt of the storm. Situations affecting one area spread like waves slowing cloud adoption, corrupting IOT, hampering distributed workforces. When networking is affected the benefits of modernized communications - competitiveness, security, organizational stability - take the hit.

RECOVER STRONGER - ENTERPRISE NETWORK MODERNIZATION

Flexibility. Scalability. Security. Hallmarks of the future of work, and key benefits of modern network architectures. ConvergeOne Networking customers accelerate cloud adoption and expand network capabilities with the deep expertise, broad industry knowledge, and technology partnerships that define network modernization. From operational core to the edge and beyond cloud enabled/software-defined technologies customers recover from storms stronger, more flexible, more scalable, and secure.

ENTERPRISE NETWORKING OFFERINGS

ConvergeOne enterprise networking services: powering the business models that engage customers, outpace competition, and execute on the future of work.

Routing & Switching Services:

Achieve the density, power, resilience, and flexibility core network infrastructures require for modern services. To deliver these performance gains, “fundamental” routing and switching must be spot-on!

SD Access (Campus):

Re-architect routing and switching to simplify control and enable proactive management. Manage user access and intent with policy-based execution of Zero Trust practices.

Secure Access Services Edge (SASE):

SASE extends security to the edge endpoint, increase reliability and simplify WAN management - optimized for branch to cloud transport

Cloud Networking Services:

Because traditional networking rules and constraints persist ensuring the full power of the cloud can be realized in a secure manner requires more time and attention than typical network networking

C1CX Secure ConnectRapid:

secure speed to service for C1CX communications services. Features high availability leveraging multiple carriers and WAN transport technologies and highly secure zero-trust security.

Secure SD-WAN:

A force multiplier for networks Secure SD-WAN brings powerful capabilities to WAN connectivity: any available transport use, multi-virtual topology configuration, performance orchestration, resilience

NETWORK TRANSFORMATION ENABLES ALIGNED AND EMPOWERED ORGANIZATION

- + With more than 80% of their wireless environment approaching end of support status and limited visibility to resolve business-impacting outages, SLC Health realized they needed a digital transformation. Design and implement a modernized SD-WAN and SASE framework forging a secure path to the cloud. Reduce complexity. Gain network visibility. Increase systemic security.
 - + Higher bandwidth operations at lower costs
 - + Increased mean time to resolution via network visibility
 - + Continuous availability and security compliance

STANDING AT THE FOREFRONT OF ENTERPRISE NETWORK MODERNIZATION

ConvergeOne advisory services drive cost agility, network resiliency and software-defined performance enhancements from the core to the edge. Our expertise, proprietary methodologies and proven experience are offered in the service mix customers need to succeed competition, and execute on the future of work.
