

IDENTITY AND ACCESS MANAGEMENT IDENTITY ACCELERATES SECURE TRANSFORMATION AND GROWTH

GAINING TRUST IN A DYNAMIC ECOSYSTEM

Today’s sprawling hybrid-cloud ecosystem is essential to flexible working. The complexity it brings is frequently exploited for gain by hackers, nation states, and even those inside the enterprise sphere of trust. If Privileged Accounts, Active Directories or Administrator Accounts are compromised exploits are amplified.

Permitting and managing trust-based fluid access in an extended ecosystem is fundamental to transformation and success. Verifying and authorizing entities, granting access and permissions to meet the scope of interaction, and enforcing it, is essential to secure growth.

ACCELERATING TRUSTED OUTCOMES FOR BUSINESS SUCCESS

ConvergeOne Identity and Access Management Services create the trust necessary to drive secure business outcomes. Compliant integrated solutions ensure only authorized entities have the access and privileges needed for role or function to gain trusted ecosystem access:

- + Improved efficiency onboarding, offboarding, or amending access rights and permissions to access entitled apps and resources in a Hybrid-Cloud ecosystem from any location, with real-time visibility, Audit functions and credential management
- + Time saving, compliant Secure Single Sign-On and Multi-Factor Authentication for layered security with contextual analysis for insider attacks and credential cloning
- + Third Party Sites protection with VPN and DNS integration
- + Real time monitoring to police and enforce privilege, aid legislative and regulatory compliance, and proactively stop attacks using AI and automation

CONVERGEONE IDENTITY AND ACCESS MANAGEMENT SERVICES

ConvergeOne Identity and Access Management provides Hybrid and Cloud Workforce, Workplace and Workload protection:

- + Identity and Access Management Advisory – designing collaborative IAM solutions for Business transformation and flexibility
- + Access Management and Authentication offers full visibility and a range of controls including Password Management, MFA, SSO, Audit, and more
- + Identity Governance and Administration provides compliance, visibility and control of Identity and Access privileges to detect and prevent inappropriate access
- + Privileged Access Management – protecting the most powerful accounts from compromise, and inhibiting the lateral movement of attackers
- + Identity and Access Managed Services for ongoing management, policy enforcement and day to day defense of the enterprise

FEATURE ACTIVATION FOR DYNAMIC IDENTITY

A large education provider needed to tighten Identity controls due to expanded remote working. Security Advisors assessed existing controls against business needs and potential threats. As the customer was a Microsoft E5 license holder, ConvergeOne activated existing license features in a real time identity-based solution at an optimized cost.

ConvergeOne's heritage and strategic partnerships allow existing investments to be leveraged and integrated into innovative solutions for business acceleration. ConvergeOne Cyber Security is Industry recognized in the Cybersecurity 500 for 3 years, by Cisco - Master Security Partner and Advanced Security Architecture Specialization, Palo Alto – Diamond Partner, Microsoft Trusted Partner, AWS and Arctic Wolf Partner of the year.
