

MODERN MEETING ROOMS & WORKSPACES

EQUIPPING THE ENTERPRISE FOR ACCELERATED GROWTH

OLD TECH SLOWS PROGRESS IN MEETINGS AND APPS

Change in the workplace is overdue as staff start to return to the office and hybrid working technologies don't interact with traditional meeting and conference room set-ups. This makes meeting experiences inconsistent in the hybrid workspace. Barriers to collaboration are amplified by old, expensive personal computers, siloed platforms, and aging in-room environments requiring updates, repurposing, and integration to deliver flexible, seamless meetings and collaboration.

EMPOWERING TEAMS TO REACH THEIR FULL POTENTIAL

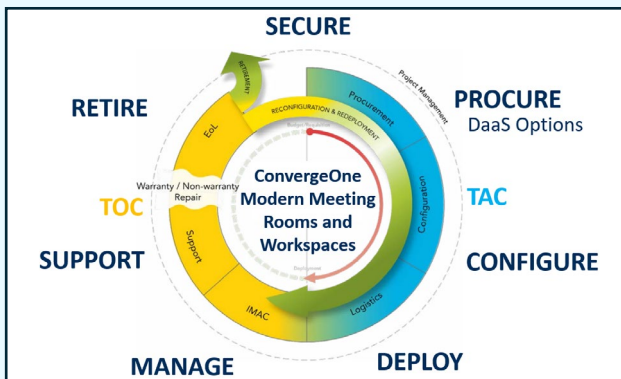

Workspace audio, visual, and user compute device solutions must converge to meet the strategic goals of the enterprise. Solutions require tight integration to allow remote and on-site workers the same collaborative opportunity and experience. Success comes from seamless meetings and collaboration in workspaces, and meeting rooms, across integrated tools and platforms, anytime, anywhere. This requires a twin approach:

- + Updating workspaces, meeting, and conference rooms with new audio-visual and sharing capabilities, integrated across all tools, platforms, and leading collaboration solutions
- + Refreshing aging personal computing devices by taking a lifecycle management approach to the procurement, configuration, deployment, management, support, and retirement of devices.

Combined benefits are a seamless user experience with lower costs, increased engagement, morale, and productivity in offices, and workspaces across the enterprise and beyond.

CONVERGEONE MODERN MEETING ROOMS & WORKSPACES

REDUCE LIFECYCLE AND OPERATING COSTS

Enterprise aligned Room Kits and personalized end-user devices augment user experiences and productivity. Optimized procurement, DaaS, asset management, and ongoing management increase uptime across all meeting and collaboration platforms and reduce asset lifecycle costs.

- + Procurement and Logistics
- + Pre and Post Deployment Support
- + Increased Uptime
- + Seamless User Experience

ConvergeOne Modern Meeting Rooms & Workspaces Services increase user experience and engagement and have flexible cost options with CAPEX, OPEX or Device as a Service (DaaS):

Room-Kits for workspace, meeting and conference room audio visual functionality. New technologies with smart camera capabilities automatically capture everyone in the room and high-fidelity immersive audio capabilities follow the conversation flow and block unwanted noise. Content sharing is seamless across multiple collaboration platforms through tightly integrated agnostic solutions.

IT Lifecycle Services for accelerated provisioning of end-user devices in both the private and public Sector. This includes design and technical engineering, procurement and logistics, staging, imaging, enrollment, flexible configuration, deployment and IMAC management with post deployment support. Customized asset and lease management, laser-etching, labeling and end-of-life disposition complete the cycle. This provide 15% efficiency gains, with 2.4x speed increases and cheaper maintenance at 2.4x compared to a 4-year-old machine.

OPTIMIZING THE MODERN WORKPLACE TRANSFORMATION

Deep partner relationships, scalable operations, and class-leading innovation, combined with further complementary services speed time to outcomes:

- + Advisory expertise to drive vision, strategy, solutions, and architecture, using a proven methodology unique to ConvergeOne
- + Professional Services to design, plan, implement, migrate, optimize and free up valuable resources
- + Fully Managed Services, AI driven, proactive management and monitoring, and MACD services for increased uptime and higher user satisfaction

ACCELERATING LEARNING WITH MODERN MEETING ROOMS & WORKSPACES

A large Midwestern school district with 30,000+ students and 72 buildings required transformational device management changes across four schools. Additional remediation for a failed in-house roll-out increased the need for proven execution, with higher scrutiny.

ConvergeOne collaboratively determined business needs, and rapidly deployed 12,000 devices to four high schools. Taking complete control and accountability, ConvergeOne systematically imaged, laser-etched, asset-tagged, and deployed educational devices using proven best-practices. A seamless solution delighted the customer and allowed IT resources to refocus on value-add activities across the user base.
