SECURITY ADVISORY AND RISK MANAGEMENT
ACCELERATE SECURE GROWTH BY DESIGN

CHALLENGES TO SECURE GROWTH

Workplace and competitive change are accelerating, driving complex digital initiatives at an unprecedented pace and increasing cyber risk to the point where it's recognized at Board level. This is compounded by an unprecedented security skills shortage.

Digital acceleration introduces hybrid-Cloud complexity, creates an explosion in man/machine identities, fuels data sprawl and increases the likelihood of legislative fines, topping over $1B last year. These changes increase the attack surface, with 5 out of 10 businesses breached.

Successful security programs at scale require strategic thinking and focused design. They must leverage existing investments, prioritize new ones, and scale with predictable costs to secure business growth and customer loyalty.
GAIN SECURE BUSINESS OUTCOMES

Successful change must be secure by design. It requires a strategic approach aligned to business objectives and overall risk appetite. This requires deep security expertise and a holistic approach focusing on prevention, detection and recovery, including securing the base, monitoring intelligently, vulnerability testing and automating response and recovery.

## CONVERGEONE SECURITY ADVISORY AND RISK MANAGEMENT

Advisory solutions provide strategic designs to reduce risk and optimize security for growth and business acceleration using an automated approach. Focusing on the prevention of successful attacks, detection of indicators of compromise, and assured recovery, they include:

+ Collaboratively based strategic outcomes
+ Roadmap and architectural design for prioritized enterprise-wide security
+ Planning and integration for a comprehensive cyber security program
+ Regulatory compliance and data governance strategies

Holistic security advisory solutions are focused on business benefits and address general or specific security concerns from product implementations to enterprise scale security programs:

+ Security Assessment
+ Cyber Security Workshop
+ Identity & Access Management Workshop
+ Secure Remote Workforce Assessment
+ Ransomware Workshop
+ DevSecOps Assessment
+ Cloud Security Briefing
+ Vulnerability Management
+ Security Adoption Services

SECURING PUBLIC SAFETY

A state government's public safety department needed fast facial recognition to provide image comparisons for criminal investigations. FBI searches were slow and limited to top tier cases.

Following an Advisory engagement, ConvergeOne provided the world's fastest and most accurate integrated facial recognition solution based on findings from the US National Institute of Standards and Technology (NIST). Public safety increased significantly as analysis of millions of images from multiple sources sped investigation resolution, independently of the FBI.
