MOBILITY & WIRELESS
FUTURE-FORWARD MOBILITY & WIRELESS NETWORKING

THE CHALLENGE OF CHANGE

Keeping pace with the ever-increasing numbers of connected devices and rising demand of availability required by the modern workplace takes advanced, leading-edge solutions to affect data transport at scale. Users expect pervasive connectivity and uncompromising performance experiences in the most demanding scenarios.

PROVEN BUSINESS PROTECTION SOLUTIONS

Working with ConvergeOne Mobility & Wireless Networking teams, customers achieve their modernization goals with a partner that has an unrivaled depth of industry expertise, proven solutions, and the range of technology partners they need to meet their unique mobility and wireless requirements.

Our solutions modernize customer networks, so they not only meet current user expectations but anticipate changing business requirements. Our solutions boost employee productivity and increase collaboration, enable customers to reach underserved populations while enjoying the ease of management, uninterrupted security, and increased data creation/consumption at the edge.

CONVERGEONE MOBILITY & WIRELESS NETWORKING OFFERINGS

Designed to exceed customers' mobility and wireless requirements ConvergeOne solutions offer a unique combination of experienced design, architecture, implementation, and support services.

Solutions are purpose-built, optimizing and modernizing wireless infrastructures, maximizing data transport, and creating secure, high-speed, resilient next-generation services that users have come to expect.

In partnership with industry-leading technology providers like Cisco, Meraki, Juniper, Extreme Networks, Aruba, and Ciena **Wireless Infrastructure and Next Gen Mobility** solutions build on years of implementation and support experience and broad industry exposure. ConvergeOne wireless infrastructure and next-gen mobility solutions solve customers' unique problems and exceed their expectations. In the rapidly changing, complex world of wireless infrastructure and mobility, ConvergeOne solutions enable our customers to be more agile, responsive, resilient, and secure so they can give their clients the wireless and mobile experiences they demand.

CUSTOMER SUCCESS GOLD

Designing + Deploying a Wireless Network for a Mining Company

+ The challenge? Implement a fully automated underground mining system allowing operators to run everything remotely via a wireless network; streamline equipment monitoring processes to extend equipment life; modernize for safety and maximize productivity. Additionally, meet government mining standards and guarantee seamless communications. ConvergeOne designed a wireless network around reliability providing continuous telemetry and automation coverage, location accuracy, semi-autonomous equipment, and fleet/task management with integrated RFID tagging. Upon implementation results exceeded expectations. Operations management processes were fully computerized, streamlined, and automated; location monitoring covered personnel and equipment, ensuring worker safety while lowering costs and modernizing mining operations.
